# NRGpilot™
SmartGrid PORTAL

Kid in a Candy Store

Developers designing new smartgrid applications like solar car ports, home microgrids with battery storage or condo EV charge billing will get asked by their customers for a management interface. NRGpilot is a new smartgrid cloud portal from Cachelan based on over 10 years of experience monitoring solar PV systems. It features graphic screens matched to each project with display of measured parameters. In addition to monitoring installed equipment, remote control is also possible.

Be the kid in a candy store specifying what you are looking for. Let Cachelan quickly create a low cost, online NRGpilot portal to match your wish list and SLD, that will impress your clients.

Monitoring energy usage of multiple tenants for allocating their monthly costs with net metered solar generation for offsetting the landlord's utility bill. See it live.
